Re: Replacing the I/O Board on a Megatouch Force Game

If you are replacing the I/O board on a Megatouch Force game, make sure the jumpers at JP5 and JP6 on the I/O board are located in the correct position. The orientation of the jumpers at JP5/JP6 will determine which USB connector on the I/O board is activated. If the I/O board is going into a Radion or Classic Force game, the jumpers must be moved as shown in the diagram below.
